## Inciner8 Supply Incinerators to Support Various UN Hazardous Waste

The treatment and disposal of hazardous waste is essential for the health and wellbeing of communities. Some of the poorest regions in the world struggle with the correct, hygienic disposal of hazardous waste due to the lack of resources and facilities to do so. Inciner8 have worked with the UN supporting many of their global missions by providing incinerators to implement waste management in some of the most poverty-stricken parts of the world. We have delivered a broad range of solutions ranging from single incinerators to projects with more than 20 units.

Many of our incinerators for UN missions are purchased by a regular client called Intertrade International Services (IIS). IIS offer a wide range of products and services in the agricultural and industrial sectors. With a global network in leading industries, IIS are a qualified, flexible supplier with a focus on providing emergency relief and supplies to United Nations and related agencies

IIS have purchased 29 incinerators from Inciner8 in the past 12 months, all for United Nations projects. The UN are very active with their missions and are in constant need of equipment to aid countries struggling with waste all over the world. We recently supplied UNMISS (United Nations Mission in South Sudan) with 20 incinerator units of four different size capacities. The purpose of this contract is to support UNISFA (United Nations Interim Security Force for Abyei) by supplying incinerators to effectively incinerate solid waste and hazardous waste, including biomedical waste. UNISFA is a peacekeeping force to the area of Abyei, which sits between northern and southern Sudan, as a result of the Abyei conflict
