Solar Incinerator

Our award winning Research & Development team has been busy putting more innovative ideas into reality. Our latest concept is now moving into production – **The Solar Incinerator**.

Power is provided via a folded array of solar panels that open to provide a large catchment area for available sunlight.

This system can be retrospectively fitted to most of our small and medium sized models in just one day.

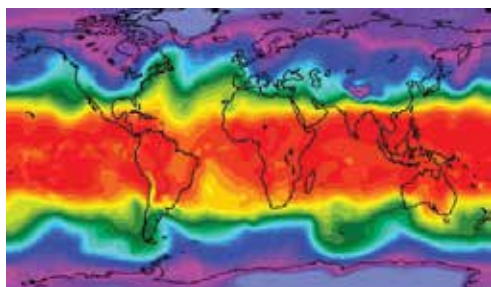

- ➔ Fuel FREE Operation
- ➔ Fully Mobile Design
- ➔ USB Charging Ports
- ➔ No Setup - Ready for Use

How does it work?

Quite Simply, we harness the power of the sun! We then use a number of patent pending processes to convert this energy into power to run our incinerator. NO FUEL IS REQUIRED.

The entire unit is housed in a self-contained 20ft high cube container. Inside there is a modified incinerator and the custom control panel and invertors.

Optimal Incineration Locations

The most ideal location for this unit is where there is plenty of sunshine. Although this technology will work best typically in tropic and equatorial regions it isn't exclusively for use there, in fact anywhere where there are 6+ hours of sunshine per day on average will see great results from this incinerator.

Speak to the Experts

Our technical sales team are always on hand to answer any questions you may have.
